

DOKOM CS

Automated Meter Reading Software

Special Features

- Easy to use
- Electronic mobile and remote meter reading
- M-Bus software drivers are integrated
- Phone and radio read are integrated
- Expandable for Internet and power line
- Single user or computer network compliant
- Modular
- Multi Language
- Automated data export
- Graphical and tabular evaluation
- Integration of maps
- User friendly help assistant

Description

Software custom designed to read resource meters i.e. water and energy meters (gas, electricity, heat) through an M-Bus network, telephone lines and/or radio.

Mobile (on site inductive or IR reading systems) may also be integrated. The software is also compatible with GSM, power line and internet transmission methods

The detection and reading of all meters connected to the system is automated.

Application

Remote water meter reading for reticulation management purposes

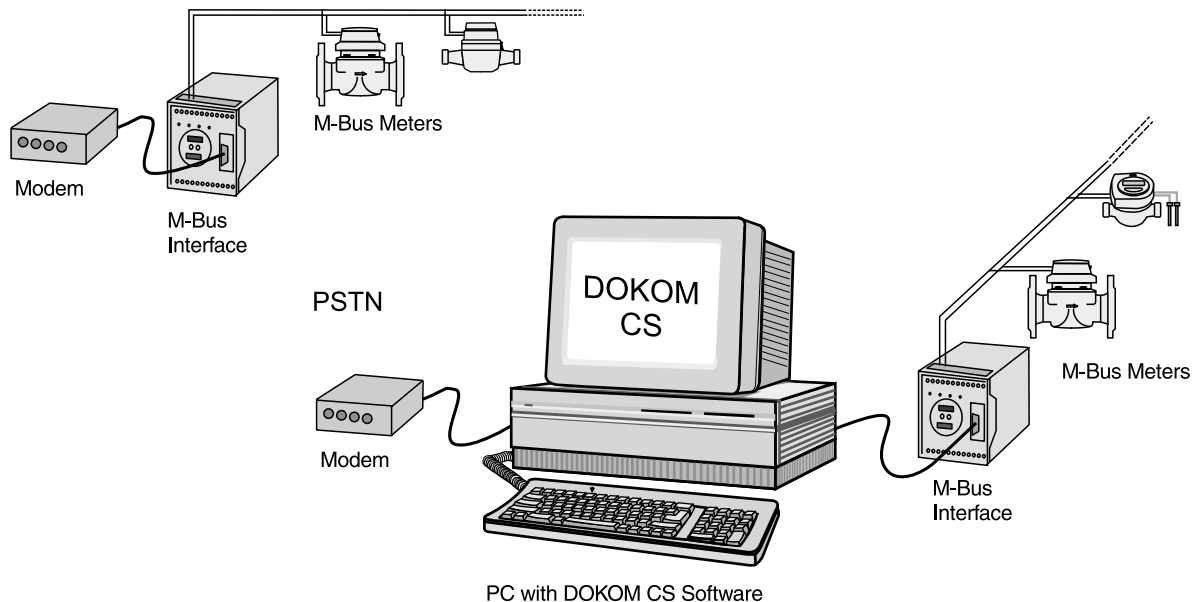

Remote reading for billing purposes

Meter monitoring

Leak detection

System Requirements

PC with Pentium or similar processor higher than 200 MHz

Microsoft Windows NT 4.0 (SP3) or 2000 '95, '98, ME or XP

Microsoft Internet Explorer 4.0 or higher

Memory 16 MB RAM (64 MB recommended)

Super VGA Monitor (Resolution 800x600 pixels)

Hard drive with a minimum of 15 MB of free space

USB port for hardware look

Planer

Up to 32 of simultaneous readout tasks programmable

Automatic readout

Automatic data export

Reading for billing

Readout for verification and system checking purposes

User readout with adjustable readout interval

Reports

Event log for register totaliser monitoring and for register exchange purposes

User defined reading plausibility limits.

Online-evaluation - graphical and tabular

Export

Data Formats

HTML (Internet)

MS-EXCEL

MS-WORD

Text

Rich Text

Text, Comma separated

Text, Tabular separated

DIF-Format

SYLK-Format

Windows Clipboard

Graphical Formats

Bitmap (BMP)

Windows Meta file (WMF)

Enhanced Metafile (EMF)

Windows Clipboard
